## Chapter 1 Establishing Vehicle Concepts and a Benchmark

|                                                            |          |                                                                                |  |
|------------------------------------------------------------|----------|--------------------------------------------------------------------------------|--|
| <b>1.1 Preparations for Establishing a Benchmark</b> ..... | <b>1</b> | <b>1.2.2 Steps for establishing a benchmark</b><br>(developing basic concepts) |  |
| 1.1.1 Introduction                                         |          | 1.2.3 Establishing individual benchmarks<br>(developing basic concepts)        |  |
| 1.1.2 Types of information to be collected                 |          | 1.2.4 Establishing benchmarks for events and<br>designing parts                |  |
| <b>1.2 Establishing a Benchmark</b> .....                  | <b>3</b> |                                                                                |  |
| 1.2.1 Identifying specific goals                           |          |                                                                                |  |

## Chapter 2 Creating a Vehicle Plan and Vehicle Layout

|                                                                                        |          |                                    |  |
|----------------------------------------------------------------------------------------|----------|------------------------------------|--|
| <b>2.1 Objective of Creating Vehicle Plan and Vehicle</b><br><b>Layout (L/O)</b> ..... | <b>7</b> | 2.2.1 Role of vehicle plan and L/O |  |
| <b>2.2 Vehicle Plan Decision Process</b> .....                                         | <b>7</b> | 2.2.2 For first-time teams         |  |
|                                                                                        |          | 2.2.3 Previously competing teams   |  |

## Chapter 3 Creating a Vehicle Development Schedule

|                                                                                            |           |                                                                    |           |
|--------------------------------------------------------------------------------------------|-----------|--------------------------------------------------------------------|-----------|
| <b>3.1 Types of Development Schedules and the</b><br><b>Purpose of Each Schedule</b> ..... | <b>11</b> | <b>3.2 How to Create a Schedule, and Sample Schedules</b><br>..... | <b>11</b> |
| 3.1.1 Purpose of creating a development schedule                                           |           | 3.2.1 Major schedule                                               |           |
| 3.1.2 Types of development schedules                                                       |           | 3.2.2 Medium schedule                                              |           |
|                                                                                            |           | 3.2.3 Minor schedule                                               |           |

## Chapter 4 Vehicle Dynamic Performance I (Power and Acceleration Performance)

|                                                                               |           |                                                                                                                       |           |
|-------------------------------------------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------|-----------|
| <b>4.1 Introduction</b> .....                                                 | <b>15</b> | 4.3.1 Necessity for a transmission (Source: <i>Automotive</i><br><i>Engineering—Basic—</i> )                          |           |
| <b>4.2 Engine Power Performance</b> .....                                     | <b>15</b> | 4.3.2 Influence of gear ratios of transmission and<br>differential on dynamic and vehicle acceleration<br>performance |           |
| 4.2.1 Determination of necessary requirements for<br>engine power performance |           | 4.3.3 Calculating acceleration performance                                                                            |           |
| 4.2.2 Improving output characteristics                                        |           |                                                                                                                       |           |
| 4.2.3 Tuning of the intake/exhaust system                                     |           |                                                                                                                       |           |
| <b>4.3 Transmission and Vehicle Acceleration</b><br><b>Performance</b> .....  | <b>19</b> | <b>Practice Exercises</b> .....                                                                                       | <b>23</b> |

## Chapter 5 Vehicle Dynamic Performance II (Braking)

|                                                                                   |           |                                                                           |           |
|-----------------------------------------------------------------------------------|-----------|---------------------------------------------------------------------------|-----------|
| <b>5.1 Braking Characteristics</b> .....                                          | <b>25</b> | <b>5.3 Brake Design Specifications and Tuning Items</b><br>.....          | <b>34</b> |
| 5.1.1 Brake performance requirements                                              |           | 5.3.1 Braking distance and deceleration                                   |           |
| <b>5.2 Distribution of Braking Force and Braking</b><br><b>Performance</b> .....  | <b>25</b> | 5.3.2 Brake system                                                        |           |
| 5.2.1 Degree of deceleration and the stopping<br>distance as a matter of kinetics |           | 5.3.3 Calculation of braking force distribution                           |           |
| 5.2.2 Braking force and speed reduction                                           |           | 5.3.4 Selecting components for a brake assembly                           |           |
| 5.2.3 Frictional force between the tires and the<br>road surface                  |           | 5.3.5 Other details                                                       |           |
| 5.2.4 Load shifting and braking force distribution                                |           | <b>5.4 Approximate Calculation of Braking</b><br><b>Performance</b> ..... | <b>36</b> |
|                                                                                   |           | <b>Practice Exercises</b> .....                                           | <b>37</b> |

## Chapter 6 Vehicle Dynamic Performance III (Turning Performance at Extremely Low Speeds)

|                                                              |           |                                                                 |           |
|--------------------------------------------------------------|-----------|-----------------------------------------------------------------|-----------|
| <b>6.1 Turning Performance at Extremely Low Speeds</b> ..... | <b>39</b> | <b>6.3 Implementation of Ackermann Geometry</b> ···             | <b>40</b> |
| 6.1.1 Geometric analysis                                     |           | <b>6.4 Minimum Turning Radius</b> ·····                         | <b>40</b> |
| 6.1.2 Tire sideslip angle                                    |           | <b>6.5 Formula for Calculating Minimum Turning Radius</b> ····· | <b>41</b> |
| <b>6.2 Ackermann Steering Geometry</b> ·····                 | <b>39</b> | <b>6.6 Approximation by Bicycle Model</b> ·····                 | <b>41</b> |
|                                                              |           | <b>Practice Exercises</b> ·····                                 | <b>42</b> |

## Chapter 7 Vehicle Dynamic Performance IV (Steady State Cornering Performance)

|                                                                                          |           |                                                                          |           |
|------------------------------------------------------------------------------------------|-----------|--------------------------------------------------------------------------|-----------|
| <b>7.1 Steady State Cornering</b> ·····                                                  | <b>43</b> | <b>7.6 Factors Influencing Steering Characteristics</b> .....            | <b>46</b> |
| <b>7.2 Geometric Relationship during Steady State Cornering</b> ·····                    | <b>43</b> | 7.6.1 Non-linearity with respect to the sideslip angle of the tire force |           |
| <b>7.3 Equilibrium Equation between Force and Moment in Steady State Cornering</b> ····· | <b>43</b> | 7.6.2 Compliance steer                                                   |           |
| <b>7.4 Steering Characteristics and Stability Factor</b> .....                           | <b>44</b> | 7.6.3 Roll steer                                                         |           |
| <b>7.5 Yaw Rate During Steady State Cornering</b> ···                                    | <b>45</b> | 7.6.4 Roll camber                                                        |           |
|                                                                                          |           | 7.6.5 Roll stiffness distribution                                        |           |
|                                                                                          |           | 7.6.6 Influence of driving and braking forces                            |           |
|                                                                                          |           | <b>Practice Exercises</b> ·····                                          | <b>46</b> |

## Chapter 8 Understanding Frame Structure Bodies and Wire Models

|                                                                                 |           |                                                              |           |
|---------------------------------------------------------------------------------|-----------|--------------------------------------------------------------|-----------|
| <b>8.1 Introduction</b> ·····                                                   | <b>49</b> | <b>8.7 Reducing Body Weight</b> ·····                        | <b>56</b> |
| <b>8.2 Function of a Car Body</b> ·····                                         | <b>49</b> | <b>8.8 Application of Wire Model to Body Structure</b> ..... | <b>57</b> |
| <b>8.3 Forces Exerted on Body</b> ·····                                         | <b>50</b> | <b>8.9 Similarity Law on Wire Models</b> ·····               | <b>58</b> |
| <b>8.4 Concept of Body Structure</b> ·····                                      | <b>52</b> | <b>8.10 Wire Models of Formula SAE Cars</b> ·····            | <b>58</b> |
| <b>8.5 Pointers on Component Attachment Parts</b> .....                         | <b>54</b> | <b>8.11 Summary</b> ·····                                    | <b>61</b> |
| <b>8.6 Explanation of Collision Phenomena and the Safety of Occupants</b> ····· | <b>55</b> | <b>Practice Exercises</b> ·····                              | <b>62</b> |

## Chapter 9 Design of Suspension and Steering, and Tire Properties

|                                                             |           |                                    |           |
|-------------------------------------------------------------|-----------|------------------------------------|-----------|
| <b>9.1 Design of Suspension</b> ·····                       | <b>63</b> | 9.2.2 Steering-related performance |           |
| 9.1.1 Introduction                                          |           | 9.2.3 Design of steering column    |           |
| 9.1.2 Rough design procedures                               |           | <b>9.3 Tire Selection</b> ·····    | <b>71</b> |
| 9.1.3 Strength calculation of parts: Inputs into suspension |           | 9.3.1 Introduction                 |           |
| 9.1.4 Evaluation of suspension characteristics              |           | 9.3.2 Functions of tires           |           |
| <b>9.2 Steering Design</b> ·····                            | <b>70</b> | 9.3.3 Basic properties of tires    |           |
| 9.2.1 Introduction                                          |           | 9.3.4 Tire selection               |           |
|                                                             |           | <b>Practice Exercises</b> ·····    | <b>74</b> |

## Chapter 10 Engine Tune-up, Muffler Design, and Practice Exercises

|                                                                   |           |                                                                                             |           |
|-------------------------------------------------------------------|-----------|---------------------------------------------------------------------------------------------|-----------|
| <b>10.1 Introduction</b> .....                                    | <b>75</b> | <b>10.4 Responsiveness</b> .....                                                            | <b>79</b> |
| <b>10.2 Engine Intake Flow Rate Assurance Design</b><br>.....     | <b>75</b> | 10.4.1 Ensuring responsiveness                                                              |           |
| 10.2.1 Treatment as a steady state flow                           |           | 10.4.2 Response to intake throttle                                                          |           |

| 13.2.4 Finishing the actual run tests (3rd-order design review)  |            | 13.4.3 Miscellaneous                            |            |
|                                                                  |            | <b>13.5 Minutes of Meetings</b> .....           | <b>121</b> |
|                                                                  |            | <b>13.6 Example Design Reviews</b> .....        | <b>121</b> |
|                                                                  |            | 13.6.1 Example of the development of a race car |            |
|                                                                  |            | 13.6.2 Supplement to the example design review  |            |

## Chapter 14 Basics of Manufacturing I (Basic Machining)

|                                               |            |                                                         |            |
|-----------------------------------------------|------------|---------------------------------------------------------|------------|
| <b>14.1 Introduction</b> .....                | <b>123</b> | <b>14.4 Practical Exercises</b> .....                   | <b>127</b> |
| <b>14.2 Lathes and Milling Machines</b> ..... | <b>123</b> | 14.4.1 Practical exercises: using a lathe               |            |
| 14.2.1 Lathes                                 |            | 14.4.2 Practical exercises: using a milling machine     |            |
| 14.2.2 Milling machines                       |            | 14.4.3 Using the products made in the exercise problems |            |
| <b>14.3 Other Machine Tools</b> .....         | <b>127</b> |                                                         |            |

## Chapter 15 Basics of Manufacturing II (Basic Welding)

|      |                                        |     |        |                                            |     |
|------|----------------------------------------|-----|--------|--------------------------------------------|-----|
| 15.1 | Introduction                           | 131 | 15.5   | Safety Training                            | 135 |
| 15.2 | Types of welding                       | 131 | 15.5.1 | Safety assurance on machining              |     |
| 15.3 | Welding Basics and Practical Exercises | 133 | 15.5.2 | Safety assurance during welding operations |     |
| 15.4 | Fabrication Exercise                   | 135 |        |                                            |     |

## Chapter 16 Measurement

|        |                                    |     |        |                                                   |     |
|--------|------------------------------------|-----|--------|---------------------------------------------------|-----|
| 16.1   | Introduction                       | 139 | 16.4   | Measuring Power and Torque                        | 144 |
| 16.2   | Measurement Methods and Parameters | 139 | 16.4.1 | Performing measurement with an engine dynamometer |     |
| 16.3   | Measurement while Running          | 139 | 16.4.2 | Performing measurement with a chassis dynamometer |     |
| 16.3.1 | Power supply specifications        |     | 16.5   | Noise Measurement                                 | 145 |
| 16.3.2 | Measurement parameters and methods |     |        |                                                   |     |
| 16.3.3 | Collecting and recording data      |     |        |                                                   |     |

## Chapter 17 Driving Skills and Safe Driving

|        |                                                                        |     |        |                                                             |     |
|--------|------------------------------------------------------------------------|-----|--------|-------------------------------------------------------------|-----|
| 17.1   | Objective                                                              | 147 | 17.4   | Manners when Driving on Circuits (Reference)                | 152 |
| 17.2   | Implementation Guideline                                               | 147 | 17.4.1 | Required mental preparedness when participating in a race   |     |
| 17.2.1 | Preliminaries                                                          |     | 17.4.2 | Manners when driving on circuits                            |     |
| 17.2.2 | Teaching materials used                                                |     | 17.4.3 | Basic techniques                                            |     |
| 17.2.3 | Driving position                                                       |     | 17.4.4 | Running the course for practice                             |     |
| 17.2.4 | Driving training                                                       |     | 17.4.5 | Actual race techniques (reference: for general races)       |     |
| 17.3   | Basic Driving Operations                                               | 147 | 17.4.6 | Use of the data logger                                      |     |
| 17.3.1 | Driving loop                                                           |     | 17.4.7 | Use of tires                                                |     |
| 17.3.2 | Driving management capability                                          |     | 17.4.8 | Driver training methods                                     |     |
| 17.3.3 | Three elements of driving                                              |     | 17.5   | Rules and Manners Related to Racing (Reference Information) | 155 |
| 17.3.4 | Considering the three elements of running in terms of friction circles |     |        |                                                             |     |
| 17.3.5 | Driving basics                                                         |     |        |                                                             |     |

## Chapter 18 Measuring Vehicle Performance and Checking Effects of Parameter Changes

|        |                                            |     |        |                                                  |     |
|--------|--------------------------------------------|-----|--------|--------------------------------------------------|-----|
| 18.1   | Introduction                               | 157 | 18.3   | Effects of Parameter Changes on Vehicle Behavior | 157 |
| 18.2   | Measurement of Vehicle Dynamic Performance | 157 | 18.3.1 | Objective                                        |     |
| 18.2.1 | Objective of measurement                   |     | 18.3.2 | Tips on implementation                           |     |
| 18.2.2 | Measurement items (inputs)                 |     | 18.3.3 | Effect verification                              |     |
| 18.2.3 | Measurement items (outputs)                |     | 18.3.4 | School car specifications                        |     |
| 18.2.4 | Equipment required for measurement         |     | 18.3.5 | Reading the output from the data logger          |     |
| 18.2.5 | Measurement guidelines                     |     |        |                                                  |     |

|                                                   |     |
